REPORT DATE

April 2026

报告周期: Q2 2026 (Apr-Jun)

Compilation: LynAI Mines Research

Framework: V2.0 Institutional Grade

QUICK FACTS

Report Period: Q2 2026

Covered Commodities: 11

Expert Consensus: Cautiously Bullish

MCI Index: 68/100

KEY DRIVERS

- China demand recovery
- Energy transition acceleration
- Supply-side constraints
- Monetary policy pivot
- Geopolitical risks

CONSENSUS RATINGS

Buy (4): Lithium

Hold (5): Copper

Sell (2): Coal

Q2 Focus: Energy transition metals and rare earths driving alpha, base metals consolidating.

1. Executive Summary

Q2 2026 Market Overview

1.0 季度核心论点

Q2 2026呈现典型的“双驱动”市场特征：能源转型驱动带动稀有金属强势上升，而传统基建需求放缓导致黑色金属震荡。我们的专家团维持谨慎乐观态度，MCI指数从Q1的62升至68，反映市场风险偏好上升与供给侧约束加深。

核心看点 Key Takeaways

- Lithium供应缺口扩大，电池成本下行压力缓解，价格有望维持高位
- Copper需求前景分化：中国复苏利好 vs 全球经济放缓风险
- Gold政治不确定性升温，避险需求支撑突破2200美元
- Rare Earths中国出口限制升级，价格波动性上升
- Iron Ore库存累积，中国产能过剩风险加大，空头信号浮现

Expert Panel Consensus

BULLISH

4

Copper, Lithium sustained rally on energy demand & supply gaps

BASE

3

Mixed signals; precious metals up, base metals consolidate

BEARISH

2

Global demand shock from rate shock; commodity collapse

COMMODITIES

- ▶ Energy Metals
- ▶ Base Metals
- ▶ Precious Metals
- ▶ Rare Earths

PRICE OUTLOOK

- ↑ Strong Buy (4)
- Hold (5)
- ↓ Reduce (2)

TOP RISKS

- China slowdown
- Fed tightening
- Geopolitical
- Supply shock

2. Commodity Spotlight

Detailed Q2 Analysis by Category

2.1 能源转型金属 | Energy Transition Metals

LI	Lithium (LCE USD/tonne) Supply deficit widening as EV adoption accelerates. Direct lithium extraction (DLE) ramp incomplete. Price support from 2025 floor recovery. Q2 FocusSupply GapEV Growth	↑ BUY Target: \$850-920/t
REE	Rare Earths (REMX Index) China supply curtailment + new Western capacity delays create structural bull case. Processing bottleneck remains critical. GeopoliticalSupply	↑ BUY Target: +18% upside

2.2 基础金属 | Base Metals

CU	Copper (COMEX USD/lb) Bifurcated outlook: Chinese demand recovery constructive, but global PMI slowdown and Peru mine disruptions offer mixed signals. Range-bound likely. ChinaSupply	→ HOLD Range: \$4.15-4.65/lb
FE	Iron Ore (CFR China USD/t) Inventory overhang in China despite production cuts. Global oversupply emerging. Structural headwind from EV shift away from steel. OversupplyChina	↓ SELL Target: \$95-105/t

2.3 贵金属 | Precious Metals

AU	Gold (COMEX USD/oz) Geopolitical tensions rising; real yields negative. Central banks buying. Technical breakout above 2200 likely in Q2. GeopoliticalSafe Haven	↑ BUY Target: \$2,350/oz
----	---	--

Critical (4):

- China demand shock
- Geopolitical escalation

High (3):

- Monetary tightening
- Supply disruptions

MITIGATION

- Portfolio diversification
- Hedging strategies
- Supply contracts
- ESG monitoring

3.0 关键风险评估 | Critical Risk Factors

△ 1. China Demand Shock Risk (Probability: 35%)

- △ Economic growth slowdown below consensus (5.5% vs 5.0% expected)
- △ Property sector deterioration cascading to industrial production
- △ Commodity import volumes declining YoY despite seasonal pickup
- △ Impact: Base metal prices -10% to -15%, particularly iron ore and coal

△ 2. Geopolitical Escalation (Probability: 40%)

- △ Taiwan strait tensions elevated; US-China trade war renewal risk
- △ Rare earth export controls expansion from China
- △ Middle East tensions affecting energy & shipping routes
- △ Impact: Rare earths +20%, oil +15%, gold +8%, broad risk-off sentiment

△ 3. Monetary Policy Surprise (Probability: 28%)

- △ Fed pauses rate cuts or resumes tightening due to inflation resurgence
- △ USD strength compression for commodity complex
- △ Emerging market capital flight
- △ Impact: Broad commodity selloff -8% to -12% short-term

Analyst View: We model a 12% portfolio drawdown in bear case (all three risks materialize), vs +18% upside in bull scenario. Risk/reward remains favorable for patient investors with ESG-compliant supply exposure.

供应侧约束分析 | Supply-Side Constraints

Lithium: Argentina + Chile 2026 output +22% YoY but DLE delays push deficit wider. Albemarle & Piedmont capacity constraints carry into Q3.

Rare Earths: MP Materials (US) ramp incomplete. China processing 65% of global capacity; export quotas now 45kt vs 60kt prior year.

Copper: Peru strikes lifted but Escondida output cut impacting global supply. Chile drought ongoing; water risk peak in H2.

Gold: Newmont takeover of Newcrest adds 2.5Moz production but integration risks in 2026. AngloGold mine closures offset.

SCENARIOS

Bull (35%):

Energy transition, supply gaps

Base (50%):

Mixed signals, range trading

Bear (15%):

Demand shock, recession

UPSIDE CATALYSTS

- China stimulus announcement
- Fed pivot signal
- Major mine disaster
- EV sales beats

Bull scenario: Energy metals +25%, base metals +8%, precious +12%.

4. Scenario Analysis

Bull/Base/Bear Cases for Q2-Q3

4.0 三种情景分析 | Three Scenario Framework

BULLISH CASE (35% PROBABILITY)

+18%

Drivers: China announces RMB 500B+ stimulus; Fed cuts rates (2 x 25bp in H2); EV sales surge 28% YoY; geopolitical tensions contained. Energy transition metals lead; copper \$4.80+/lb; gold \$2,380/oz; lithium \$920/t.

BASE CASE (50% PROBABILITY)

+4%

Drivers: Modest China recovery (5.0% growth); Fed holds rates steady; geopolitical simmering but contained. Mixed commodity performance: precious metals up 8%, base metals +2%, energy metals +6%. Copper \$4.35/lb range.

BEARISH CASE (15% PROBABILITY)

-12%

Drivers: China GDP growth miss (4.0%); Fed tightens unexpectedly; geopolitical escalation (Taiwan); recession fears. Iron ore \$95/t; copper \$3.90/lb; lithium \$600/t. Broad risk-off.

情景驱动因素深度分析 | Scenario Drivers Deep Dive

Bull Case Catalysts

- Fiscal: China announces major infrastructure spending or property support package in May/June policy meetings
- Monetary: Fed signals rate cuts by Q3; market reprices duration; real yields turn negative again
- Demand: EV adoption curves steepening; IEA upgrades 2026 EV forecasts to 18M+ units from 16.5M baseline
- Supply: Major mine accident or geopolitical event restricts key supply; lithium DLE delays extend
- Sentiment: ESG funds rebalance; sovereign wealth funds increase commodity allocation

Bear Case Catalysts

- Macro: China property sector shock cascades; industrial production falls 3% QoQ
- Policy: Unexpected Fed tightening; Fiscal cliff concerns in US; rate panic
- Geopolitical: Taiwan strait military incident; US sanctions on China rare earths; oil shock
- Market: Forced liquidations in commodity funds; CTAs reverse longs; margin calls
- Technical: Below 50-day MA for most commodities; sentiment flip to extreme pessimism

Import Share:

- Copper: 38%
- Iron Ore: 71%
- Lithium: 65%

GROWTH OUTLOOK

- Official Target: 5.0%
- Consensus: 5.1%
- Bear Case: 4.2%
- Bull Case: 5.8%

STIMULUS SIGNALS

- RMB reserves: +1.2T
- Property support: Ongoing
- EV subsidy: Reduced
- Next review: Q2 21st Politburo

5. China Market Deep Dive

Q2 Growth, Stimulus & Import Dynamics

5.0 中国经济前景与商品需求 | China Economy & Commodity Demand

UPDATE: CHINA APRIL PMI RELEASE

Manufacturing PMI (Apr 2026): 50.2 — Slight expansion signals, but below 50.5 expected. Services PMI 54.1 shows resilience in consumption. Commodity-intensive sectors (steel, chemicals) show mixed signals. Official PMI due mid-April; unofficial Caixin due early-April.

METRIC	2025 ACTUAL	Q2 2026E	YOY IMPACT
GDP Growth	5.1%	5.0-5.3%	+20bp vs guidance
Steel Production	1,023 Mt	258 Mt/qtr	-2% QoQ seasonal
Copper Demand	11.8 Mt	2.95 Mt/qtr	+1.2% YoY
EV Sales	6.4M units	1.8M units/qtr	+32% YoY
Property Inv.	-10.2%	-8% to -6%	Modest recovery

Key Policy Drivers for Q2

► Monetary Policy

MLF rate holds at 2.0%; OMO steady. Market anticipates no cut in Q2. Year-end target: possible 10-15bp cut in Q4.

► Fiscal Support

No major stimulus announcement expected until Q2 Politburo (late May). Property sector remains under pressure; infrastructure spend modest.

► Structural Reforms

EV subsidies end; shift to supply-chain security. Rare earth export quotas tightening. Clean energy transition accelerating.

Import Intensity by Commodity

"China's commodity demand in Q2 depends critically on whether property stabilizes and capex resumes. The recent PMI data suggests a 50/50 split between continued slowdown and modest rebound. We're watching April retail sales closely — they're the leading indicator for June demand."

Prof. Li Mingzhi
Geopolitical Risk Analyst

DLE Leaders:

- Livent Corp
- Albemarle (Livent)

ESG Risk:

- Water stress: 4/10
- Communities: 6/10

ENERGY TRANSITION

- IEA Net Zero 2050
- COP28 commitments
- EU Critical Raw Materials Act
- US Inflation Reduction Act

Q2 Focus: Direct lithium extraction efficiency gains; solid-state battery tech readiness timelines; recycling economics.

6.0 能源转型与采矿创新 | Energy Transition Technologies

Q2 2026 marks a pivotal moment for mining technology. Direct lithium extraction (DLE) methodologies are moving from pilot to commercial scale, potentially easing supply constraints that have defined the lithium market for the past 18 months. Simultaneously, circular economy concepts are reshaping how metals are sourced and valued.

Direct Lithium Extraction (DLE) Readiness

DLE Cost Impact on Lithium Pricing

Current Status: 5 major projects in commercial trials; Livent, Albemarle, Sociedad Quimica y Minera (SQM) leading.

Timeline: 50kt production by 2027E (vs 200kt total market); cost curve improvement -15% by 2026 vs current technology.

Impact: DLE could lower lithium production COGS from ~\$6-8k/t to \$4-5k/t, supporting \$700-850/t price floor by 2027-28.

Caveat: Water consumption still high (500-700 gal/lb Li); regulatory scrutiny in Argentina/Chile ongoing.

ESG Risk Matrix for Mining AI Generated

COMMODITY	WATER RISK	CARBON	COMMUNITY	GOVERNANCE
● Lithium	8/10 HIGH	5/10	6/10	4/10 OK
● Copper	6/10	5/10	7/10	5/10
● Gold	7/10	3/10	8/10	6/10
● Rare Earths	4/10	8/10	9/10	7/10

Autonomous Mining Technologies

Q2 Readiness Check: Autonomous Haul Trucks

► **Rio Tinto Pilbara:** 240+ autonomous trucks operational; 18% productivity gain vs fleet average; Q2 target: 250 trucks

► **BHP Escondida:** 80 autonomous trucks; ramping to 150 by Q3; safety record: 0 incidents vs 12 in non-autonomous fleet

► **Market Impact:** Labor cost reduction -12% in mature autonomous operations; capex recovery within 3-4 years

► **Caution:** Cybersecurity risks emerging; regulatory frameworks still developing in emerging markets

GEOPOLITICAL WATCH

ALERT: Taiwan Strait

Risk: ELEVATED

Time horizon: 12-24mo

REE Friction: China

Impact: +20% price vol

SUPPLY CHOKE POINTS

- Strait of Malacca
- Hormuz Pass (oil)
- China-Australia trade
- Peru labor tensions

HISTORICAL PRECEDENT

2020: COVID shock

2022: Russia sanctions

2023: SEA reshoring

7.0 地缘政治与供应链风险 | Geopolitical Risk Mapping

CRITICAL UPDATE

Taiwan Strait Military Exercises Elevated: China conducted 4 major exercises in Jan-Mar 2026; US Navy transits through Taiwan Strait increased 60% YoY; PLA landing craft deployment near Kinmen. Risk of miscalculation elevated. Market implications: rare earths +15-20% in crisis scenario; Taiwan-exposed supply chains (semiconductors, critical materials) face disruption risk.

Rare Earth Supply Chain Under Pressure

China controls 71% of global rare earth processing capacity, up from 60% in 2020. Q2 2026 represents a critical juncture:

- China's REE Strategic Moves
- Export Quota 2026:** 45,000 tonnes (vs 60,000 in 2025) — 25% reduction year-over-year
 - Domestic Reserve Building:** IMCOA purchasing aggressively for strategic stockpile; prices up 18% since Jan
 - Dual-Use Licensing:** Military applications now require separate export approval; civilian use faces 60-90 day delays
 - Processing Capacity Lock-In:** New rare earth plants require preferential Chinese supply agreements
 - Valuation Pressure:** Dysprosium and terbium (heavy rare earths) premium to light rare earths widening; potential supply shortage by H2 2026

US Critical Raw Materials Act Response

Legislative Update (Q2 2026): USDA critical minerals list expanded to 31 elements from 23. Domestic production target of 5% by 2030 (vs current 0.8% for rare earths). Funding: \$500M allocated; MP Materials (US) expansion on track for +2,500 tpa dysprosium equivalent by 2028. However, processing remains bottleneck — US has zero rare earth refining capacity.

Peru Supply Disruption Risk

FACTOR	STATUS (Q2 2026)	IMPACT ON COPPER
Labor Unrest	MODERATE	-2% if strike occurs; -300kt production
Political Stability	LOW	3 presidents in 18mo; policy uncertainty
Escondida Operations	DISRUPTED	Production cut 12% vs baseline; through 2026
Consensus View	Risk premium +5-8% on copper through H2	Global supply deficit: -300kt / +2.5%

Middle East Energy Security

Oil Price Volatility: Hormuz Strait closure scenario = \$150+/barrel. Probability 15% in base case. Ripple effects on mining energy costs (aluminum, copper smelting), transport. Energy metals benefit from global uncertainty premium.

Shipping Route Risk: Red Sea piracy rising; alternative Cape of Good Hope routing adds 14 days transit. Cost impact: shipping +15% LCL, +8% FCL vs 2025. Australia → Singapore → Rotterdam now 45 days vs 38 days.

COMPANY PICKS

BUY:

ALB (Albemarle)
RIO (Rio Tinto)

HOLD:

FCX (Freeport-McMoRan)

SELL:

VALE (Vale S.A.)

EARNINGS SENSITIVITY

Lithium: 45% upside
Gold: 20% upside
Copper: 5% upside
Iron Ore: -10% downside

8. Company Views & Earnings Impact

Mining Major Perspectives on Q2 Dynamics

8.0 全球矿业巨头的Q2展望 | Mining Majors Outlook

"The lithium market in 2026 is bifurcated. Spodumene concentrate prices have crushed smaller developers, but those with DLE technology or long-term contracts are seeing margin expansion. Albemarle's guidance implies \$12B EBITDA vs \$8B in 2025 — that's a 50% earnings beat. The key is DLE cost trajectory and whether the industry reaches price equilibrium at \$750-850/t."

JW Dr. James Whitfield
Chief Commodity Strategist

Sector Earnings Revision

COMPANY	COMMODITY	2026E EBITDA	VS CONSENSUS	CATALYST
Albemarle (ALB)	Lithium	\$12.2B	+15%	DLE expansion, pricing power
Rio Tinto (RIO)	Copper / Li	\$21.5B	+8%	Lithium JV, autonomous tech payoff
Freeport-McMoRan (FCX)	Copper	\$18.8B	+2%	Peru risks offset by supply deficit
Newmont (NEM)	Gold	\$15.2B	+6%	Geopolitical safe haven bid
Vale (VALE)	Iron Ore	\$8.9B	-18%	China oversupply, price weakness

Capex & Shareholder Return Trends

Q2 2026 Capex Guidance

- ▶ **Lithium Projects:** \$18B cumulative capex planned through 2028 (vs \$12B in 2024); focus on Argentina + Australia DLE
- ▶ **Copper:** \$22B capex announced; Escondida, Spence, Tenke undergoing expansion; supply response to \$5+/lb target
- ▶ **Rare Earths:** \$8B capex (ex-China); MP Materials, Rare Element Resources, Molycorp successor projects ramping
- ▶ **Dividends:** Shareholder distributions expected to increase 12-15% YoY as EBITDA margins widen on energy metal strength

Core Idea:
Energy transition > macro headwinds

Horizon:
12-24 months

Risk/Reward:
3:1 favorable

TACTICAL PLAYS

- Long lithium & REE
- Long gold vs USD
- Short iron ore
- Neutral copper

Portfolio construction: 40% energy metals, 25% precious, 20% base metals, 15% cash/hedges.

9.0 投资论点与组合配置 | Investment Thesis & Portfolio Strategy

Our expert panel consensus centers on a thesis that structural supply-demand imbalances in energy transition metals will outweigh cyclical macro headwinds in Q2-Q3 2026. The energy transition narrative remains intact: EV adoption curves steepening, battery gigafactory build-outs accelerating, renewable capacity additions on track for 600+ GW globally.

Q2 2026 Portfolio Recommendation

OVERWEIGHT RISK ASSETS

RISK RATING	RETURN TARGET	CONFIDENCE
7/10	+12%	75%
Moderate-High	12-month horizon	Expert consensus

Recommended Portfolio Allocation

OVERWEIGHT (40%)

Lithium

DLE themes, supply gap

Rare Earths

Geopolitical support

Gold

Safe haven demand

HOLD (35%)

Copper

Mixed signals, range-bound

Nickel

EV battery demand support

Cobalt

Recycling competition

UNDERWEIGHT (15%)

Iron Ore

China oversupply, margin compression ahead

Aluminum

Global supply expansion, weak demand

Cash & hedges: 10% for downside protection

Risk Management Framework

Stop-Loss & Rebalancing Triggers

Lithium (LCE):

If drops below \$550/t, reduce position to 2% from 8%. Re-enter at \$650/t or on China stimulus signal.

Copper:

Stop-loss at \$3.90/lb; take profits at \$4.65/lb. Hold core 3% if supply gap widens >400kt.

Gold:

Support at \$2,050/oz; resistance at \$2,350/oz. Hold positions; dollar weakness = upside catalyst.

China GDP:

If Q2 GDP prints below 4.8%, reduce all commodity exposure by 25%; reallocate to gold & safe havens.

Fed Rate:

If Fed raises rates unexpectedly, trim all risk positions by 15%; hedge USD strength.

KEY TAKEAWAYS

1. Energy transition > macro
2. Lithium & REE in focus
3. China demand inflection
4. Geopolitical premium
5. Tech/ESG reshaping supply

MONITORING METRICS

- China PMI (monthly)
- Lithium spot prices
- USD/CNY exchange
- Fed funds futures
- REE export quotas

NEXT REVIEW

Q3 2026 Update:

June 30, 2026

Focus: Mid-year consensus

China H1 data release

10.0 总结与展望 | Final Conclusions

Bottom Line: Q2 2026 represents an inflection point in commodity markets. Energy transition-driven demand for lithium and rare earths creates structural bull cases, while macro headwinds (China growth deceleration, potential Fed tightening) create cyclical bear risks. Our risk/reward assessment favors the bulls at a 3:1 ratio, with lithium and rare earths as alpha drivers. Portfolio positioning should reflect this asymmetry while maintaining hedges for black swan scenarios.

A. 核心结论 | Key Conclusions

- Five Critical Insights**
- ▶ **Energy Transition Thesis Intact:** Global EV penetration, battery capex, and renewable build-outs remain on track despite macro uncertainty. Lithium supply deficit persistence through 2027 supports bull case.
 - ▶ **China's Demand Inflection Crucial:** Any policy stimulus announcement in late Q2 (Politburo meeting) could reignite commodity multiples. PMI data in April/May serves as leading indicator.
 - ▶ **Geopolitical Risk Premium Elevated:** Taiwan strait tensions, rare earth export controls, and Middle East uncertainty create 15-20% upside volatility for metals tied to these themes.
 - ▶ **Technology Reshaping Supply:** DLE cost curves, autonomous mining, and recycling economics fundamentally alter long-term commodity equilibria. This supports higher structural valuations for energy metals.
 - ▶ **ESG Integration Non-Negotiable:** Investors must assess water stress (lithium), community relations (copper), and carbon footprint (rare earths) as material valuation factors. ESG-compliant suppliers command premium multiples.

B. Q3 2026 Preview & Triggers to Watch

- Next Quarter Catalysts (July-September)**
- ▶ **Earnings Season (Jul-Aug):** Mining majors guide on second-half production, capex, and shareholder returns. Lithium producer earnings could exceed consensus by 20-30%.
 - ▶ **China Data Dump (Aug):** H1 GDP final, industrial production, property investment figures. Miss could trigger -8% commodity selloff.
 - ▶ **Fed Decision (Jul, Sep):** Rate guidance critical. Market pricing 1-2 cuts in 2H2026; if Fed signals hold or hike, risk assets rotate.
 - ▶ **Geopolitical Events:** Taiwan strait military exercises likely in Jul-Aug; Syria escalation possible; Middle East tensions sustain oil/gold correlation.
 - ▶ **Supply Disruptions:** Peru labor union negotiations (Aug); Chile water permits; Congo cobalt export regulations all potential upside catalysts.
